Worksheet: cleaning the energy data set

Northfield Institute - demo learning resource for the Lectern LMS template

Your task

Load household-energy.csv and produce a tidy table of daily usage per household.

Steps

1. Check shape, types and missing values. Write down what you find.
2. Readings are in kWh, but some rows use Wh. Find and convert them.
3. Remove duplicate meter readings (same household and timestamp).
4. Decide how to handle gaps: drop, fill or flag. Justify your choice.
5. Melt the 24 hourly columns into a long table, then sum per day.

Hand in

Your notebook and three sentences on the biggest data problem you fixed.
